### **DETAILED ACTION**

In response to the amendments filed 03/10/2005 and 04/29/2005, claims 1-1 have been cancelled; newly added claim 12 is pending.

#### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/29/2005 has been entered.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 12 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claim recites the feature "said key includes only thirty nine unique bics and wherein each of said thirty nine unique bics represents only forty four sounds". This feature does not appear to be supported by the specification as originally filed. Although the specification recites identical wording to the above limitation on page 5, in the description of Figure 1, it does not teach the specific 39 bics which represent the 44 sounds. On page in the first line a bic is defined as a representative letter or combination of letters. The bic is then depicted

Art Unit: 3713

in Figure 1 within a pair of "slash marks". There are 44 such unique bics identifiable in Figure 1. These are generally identified as five (5) short vowels, five (5) long vowels, five (5) vowel pairs, five (5) vowel plus R, eighteen (18) unigraphs, five (5) digraph, and one (1) trigraph. Given this the specification has described how 44 unique bics can represent 44 sounds, but falls to teach how 39 bics can represent 44 sounds.

### ***Response to Arguments***
